About Me

Fresh B.Tech Computer Science graduate with about a year of internship experience building backend applications in **Java** and **Spring Boot**. I enjoy writing clean, working code, understanding how systems fit together, and picking up new things quickly. Looking to join a team where I can contribute meaningfully and keep growing as a Java developer.

Technical Skills

Languages	Java (primary), Python, SQL
Frameworks	Spring Boot , Spring MVC, Spring Security, Hibernate/JPA
APIs	REST API development, Postman
Database	MySQL — schema design, basic query optimization
Testing	JUnit , unit testing, basic debugging
Tools	Git, Maven, IntelliJ IDEA, CI/CD (basic)

Work Experience

Software Development Intern — Kodnest Jun 2025 – May 2026

- Worked on backend development for two applications — **Crayon** and **She Weaves** — using **Java** and **Spring Boot**, building features under the guidance of senior developers.
- Built and tested **10+ REST APIs**, wrote basic documentation for each, and made sure the endpoints behaved correctly before integration.
- Wrote **JUnit** unit tests for the modules I owned and fixed bugs flagged during testing and code review — learned a lot about writing reliable, testable code through this process.
- Spotted a slow **MySQL** query causing API delays, optimized it with better indexing, and saw around a **10% improvement** in response time.
- Implemented **JWT** authentication and role-based access control with **Spring Security** for one of the applications.
- Wrote a small **Python** script to automate a repetitive internal task — nothing fancy, but it saved the team regular manual effort.

Projects

She Weaves — *E-Commerce Backend* · Java · Spring Boot · github.com/AditiKushwaha01/She-Weaves
MySQL

- Built the backend for a basic e-commerce app covering product listing, cart, and order features using **Java** and **Spring Boot**.
- Set up **REST APIs** for all the main flows, tested them with **Postman**, and fixed edge cases before wrapping up.
- Added **JWT** login and role-based access; used **MySQL** with indexed queries to keep things reasonably fast.

TaskPilot AI — *Meeting Task Extractor* · Java · Spring Boot · github.com/AditiKushwaha01/TaskPilotAi
Python · MySQL

- Built a tool that processes meeting transcripts and automatically extracts action items — the **Java/Spring Boot** backend handles storage and API serving, while a **Python** script does the text processing.
- Wrote **JUnit** tests for the Java layer and debugged integration issues between the two components until things worked end-to-end.
- The tool cut down the time spent manually noting tasks after meetings by roughly **15%** in testing.

Education

B.Tech, Computer Science — Dr. A.P.J. Abdul Kalam Technical University **CGPA: 8.04 / 10**
Nov 2021 – Jul 2025

Certifications & Achievements

OCI AI Foundation Associate — Oracle, 2025 — Basics of AI/ML and cloud services
LeetCode — **300+ Problems Solved** — Consistent practice in Data Structures, Algorithms, and SQL
